

THE SITUATION

TransferGo is a registered payment service provider operating in most of Europe. The company is supervised by HM Revenue & Customs (HMRC) under the Money Laundering Regulations and regulated by the UK Financial Conduct Authority (FCA) as an authorized payment institution.

Over the past three years they have built a powerful network of over thirty banking partners. Tens of thousands of people have quickly and safely sent money home using their platform.

THE CHALLENGE

In 2015, the growth of the company was putting their development under pressure and was fighting for the absolute best services and features that they could deliver to their customers as quickly as possible.

The client was looking for a vendor to:

- Improve collaboration between teams (Business/Dev/Ops) by improving the transparency required for effective decision making.
- Ensure faster time-to-market and improve application delivery times
- Develop stable and reliable operating environments
- Provide continuous release and deployment to help plan, schedule and control the movement of releases to test and live environments.
- Implement settings for availability for a Service Level Objective (SLO) of 99% uptime and general availability for service outside of scheduled maintenance windows, thus to give the possibility to scale up or down as needed.

THE SOLUTION

LayerV built the client cloud platform to accommodate the dynamic nature of a FinTech start-up.

TransferGo incorporated DevOps practices from LayerV to utilize their company's efficiency and capabilities, thus, to get more done. TransferGo was able to deliver applications with maximum speed, functionality, and innovation.

Measurable benefits of implemented DevOps practice implemented by LayerV include:

- **Shorter Development Cycle** - broke down unnecessary processes and applied a new target development model.
- **Increased Release Velocity** - reduced deployment complexities and improved integration.
- **Improved Defect Detection** - applying validation checks to identify root cause defects and prevent them from recurring.
- **Reduced Deployment Failures and Rollbacks** - Overall quality management and release process improvements meant less failures.
- **Reduced Time to Recover upon Failure** - 99% SLO uptime and general availability was met due to newly improved DevOps process and solution.

"LayerV have been very helpful and professional regarding the project we specified recently. We are quite happy to say that LayerV did a great job."
